Copilot CLI

Your terminal just got a brain.

Welcome to GitHub

COPILOT

CLI Version 0.0.382

Version 0.0.382 · Commit 18bf0ae

Copilot can write, test and debug code right from your terminal. Describe a task to get started or enter ? for help. Copilot uses AI, check for mistakes.

- Logged in as user: cinnamon-msft
- Connected to GitHub MCP Server

Confirm folder trust

Stop Googling. Start Prompting.

```
gh copilot suggest · gh copilot explain · gh copilot ask
```

Three commands. Infinite power.

gh copilot suggest

Natural language → terminal command

```
gh copilot suggest "with what approach can parallel processing be improved in this PR"
```

gh copilot explain

Any script, decoded in plain English

```
gh copilot explain "$(cat deploy.sh)"
```

gh copilot ask

General dev questions, right in the terminal

```
gh copilot ask "what does HEAD~1 mean in git?"
```

One tool. Three modes.

Interactive

`copilot`

Full UI for humans

User runs CLI locally on their machine with full interactive UI and prompts

Headless

`copilot -p`

CI/CD pipelines

Non-interactive execution for automation pipelines and CI/CD workflows

Server

`copilot --server`

Remote JSON-RPC

Exposes JSON-RPC port for external clients to drive CLI functionality remotely

Install in 10 seconds.

macOS / Linux

```
brew install copilot-cli
```

Windows

```
winget install GitHub.Copilot
```

Any OS (npm)

```
npm install -g @github/copilot
```

That's it. No config. No API keys.

Built-in Agents.

Specialists on demand.

General

Complex multi-step tasks

Research

Deep GitHub + web search

Plan

Architect before you code

Autopilot

Runs until the task is done

+ Shift +TAB

+ Create your own with a simple `.agent.md` file

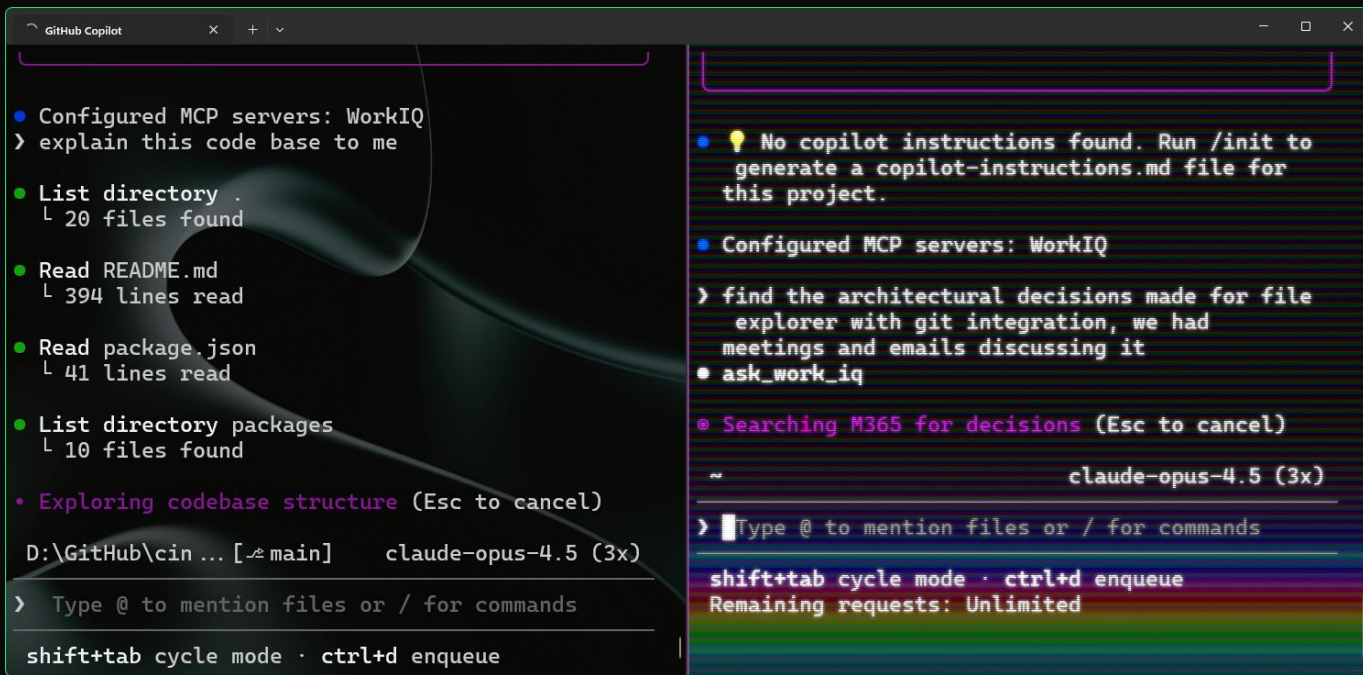

OR

Make your own agent.

Design a simple .agent.md file

Parallel Copilot

Use two agents in parallel (sub-agents)

The image shows two side-by-side windows of the GitHub Copilot interface, demonstrating the use of two parallel agents (sub-agents) to perform different tasks simultaneously.

Left Window (Agent 1):

- Configured MCP servers: WorkIQ
- > explain this code base to me
- List directory .
 - 20 files found
- Read README.md
 - 394 lines read
- Read package.json
 - 41 lines read
- List directory packages
 - 10 files found
- Exploring codebase structure (Esc to cancel)
- D:\GitHub\cin ... [- main] claude-opus-4.5 (3x)
- > Type @ to mention files or / for commands
- shift+tab cycle mode · ctrl+d enqueue

Right Window (Agent 2):

- No copilot instructions found. Run /init to generate a copilot-instructions.md file for this project.
- Configured MCP servers: WorkIQ
- > find the architectural decisions made for file explorer with git integration, we had meetings and emails discussing it
- ask_work_iq
- Searching M365 for decisions (Esc to cancel)
- ~ claude-opus-4.5 (3x)
- > Type @ to mention files or / for commands
- shift+tab cycle mode · ctrl+d enqueue
- Remaining requests: Unlimited

Skills & Plugins

Add new skills with /skills add

*Can be project-specific or global in your
.copilot/skills or .agents/skills folder*

Add new plugins with /plugin

```

PowerShell
x + ~

• Available Skills

Custom:
  • git-commit
    Execute git commit with conventional commit message analysis,
    intelligent staging, and message generation. Use when user asks to
    commit changes, create a git commit, or mentions "/commit". Supports:
    (1) Auto-detecting type and scope from changes, (2) Generating
    conventional commit messages from diff, (3) Interactive commit with
    optional type/scope/description overrides, (4) Intelligent file staging
    for logical grouping

Found 1 skill. Use /skills info <name> to view details.

~
claude-opus-4.5 (3x)

> █ Type @ to mention files or / for commands

shift+tab cycle mode
Remaining requests: Unlimited

```

Slash commands.

Power at your fingertips.

/plan

Architect before writing code

/review

Instant code review

/diff

See what changed

/model

Switch AI models live

/mcp

Manage MCP servers

/yolo

Enable all permissions

/context

Token usage at a glance

/compact

Summarise & compress context

Context is everything.

@-mention files

Type @ to inject any file directly into your prompt.

Paste images

ALT+V / CMD+V — drop screenshots straight into the CLI.

Infinite sessions

Use /compact to summarise context. Never start over.

GitHub Copilot CLI

Built-in tools via MCP servers

github

Provides access to GitHub API operations

edit

Provides file editing capabilities through the filesystem MCP server

bash

Provides shell command execution

web-fetch

Provides HTTP request capabilities for fetching web content

Extend further with MCP servers and custom skills.

My Best Feature

Paste image (screenshot) in CLI

ALT+V / CMD+V to paste images into CLI
